One Time Pay	
Transaction: 0000003023, ID: 10109365, Effdt: 2017-05-10	Unit: LAMED:Pending

Step	Action
1.	The <b>One-Time Payments</b> page displays details for the pending payment.
	As you review a transaction in UCPath, refer to your local business process, which may include specific approval guidelines.
2.	The system displays the <b>Requester ID</b> and <b>Name</b> of the user who submitted the transaction for approval. The system also displays the date and time it was submitted.
	Be sure to review any detail listed in the <b>Initiator Comment</b> field before you begin your review. Initiators use this field to include information that may be useful during the approval process. In this example, the initiator did not enter any comments.
3.	The transaction header displays the Transaction ID number, the employee's Name, the Employee ID number and the Empl Record number.

Step	Action
4.	If the initiator edited ChartField values, the <b>Do you want to override the</b> <b>ChartField values?</b> check box is selected and the <b>ChartField Detail</b> section displays override details. In this example, the requester did not override the default ChartField values.
5.	The <b>New One Time Payments</b> section provides details regarding the payment request, including the earnings code and payment amount.
6.	The <b>Current One Time Payments</b> section provides details regarding the employee's current additional payments. In this example, the only additional pay for the employee is the pending payment awaiting approval.

One Time Pay Path	~
Mot Routed	>

Step	Action
7.	In this example, there is only one row of data as indicated by the 1 of 1 value. Be sure to verify whether there are multiple rows to review and approve. If there are multiple rows, use the <b>View All</b> link to display all rows of data on a page. When this feature is enabled, the link changes to read <b>View 1</b> , so that you can return to the original setting.

Step	Action
8.	Each approver is assigned to a specific workflow approval level. Some transactions require only one level of approval, while others require multiple levels. In this example, the transaction requires multiple levels of approval and the first approval is pending.
	The Approver 1 level can approve or deny transactions, but cannot push back a transaction.
	The Approver 2 and 3 levels can approve, pushback to a previous approver (not the initiator) or deny transactions.
9.	After you review the transaction details, you can approve, push back (if applicable) or deny the transaction. If necessary, you can click the <b>Return</b> button to return to the search page to search for another transaction.
	Comments are required if you push back or deny a transaction.
	In this example, you will approve the transaction.
10.	When you are ready to approve the transaction, click the <b>Approve</b> button.           Approve

Step	Action
11.	After you approve a transaction, the transaction page no longer displays the approval action buttons.
	The approval status monitor (the <b>One Time Pay</b> section in this example) remains at the bottom of the page. This section displays the approval workflow details, including completed and pending approvals.
12.	The <b>Approval Status</b> field displays <b>Pending</b> until final approval. Upon final approval, this field displays <b>Approved</b> .
13.	You have approved an one-time payment request. End of Procedure.
